Enquête Post Censitaire (2023) (EPC 2023)*Aucun*

Overview	
Type	Enquête budget-consommation des ménages [hh/ies]
Identification	TGO-INSEED-EPC-2023-001
Version	Production Date: 2023-03-01 Derniere version des données après apurement <u>Notes</u> Derniere version de la base qui a permis le calcul des indicateurs et la production des tableaux
Series	C'est la premieres du genre
Abstract	
<p>L'enquête post-censitaire du RGPH5 a pour objectif général d'évaluer le niveau de couverture du dénombrement général. Les objectifs spécifiques de l'EPC sont :</p> <ul style="list-style-type: none"> - déterminer le niveau de couverture du dénombrement des ménages ; - déterminer le niveau de couverture du dénombrement des individus ; - évaluer la qualité des données de certaines variables clés telles que l'âge, le sexe, le lien de parenté avec le chef de ménage et l'état matrimonial ; - ajuster au besoin l'effectif de la population. <p>A l'issue de la collecte, de l'exploitation et de l'analyse des données de cette enquête, il sera obtenu les taux de couverture et d'omission du dénombrement ainsi que les autres taux qui leur sont associés par strate (Préfecture du Golfe, Autre Urbain, Rural) et pour l'ensemble du pays.</p> <p>Les effectifs de population issus du fichier brute du dénombrement général pourraient être ajustés suivant l'ordre de grandeur des taux d'omission calculés grâce à des coefficients de redressements fournis par l'EPC.</p>	
Kind of Data	Données échantillonnées [ssd]
Unit of Analysis	ménages individus

Scope & Coverage	
Scope menages individus	
Keywords	ménages, individus
Topics	Conditions de travail [3.6], Formation de base [6.1], Enfants [12.1], Vie de famille et mariage [12.5]
Time Period(s)	2023
Countries	TOGO
Geographic Coverage L'enquête est représentative seulement pour un échantillon dans region,prefecture, urbain	
Universe L'enquête couvre l'ensemble de la population résidente (femme hommes,enfants)

Sampling

Sampling Procedure

Taille de l'échantillon

La détermination de la taille de l'échantillon est généralement fondée sur une triple approche. Elle dépend de l'indicateur mesuré, du niveau de confiance souhaité et de la précision que l'on se fixe. Une taille importante de ZD minimiserait l'erreur d'échantillonnage car plus grande est la taille de l'échantillon, plus l'erreur d'échantillonnage décroît.

Pour une précision donnée, il correspond une taille minimum qui doit être parfaitement en accord avec le budget de l'enquête et le niveau souhaité de désagrégation des données pour l'analyse. Pour obtenir des résultats représentatifs et extrapolables, la taille de l'échantillon est déterminée indépendamment dans chaque domaine. On se fixe une précision de 95% et une marge d'erreur de 10% de l'indicateur d'intérêt.

La taille n de l'échantillon des ménages par domaine d'étude est déterminée par la formule :

Où :

- n représente la taille de l'échantillon dans un domaine ;
- p proportion de l'indicateur que l'on cherche à mesurer (ici c'est le taux de couverture) ;
- z est le niveau de confiance à 95% (1,96) ;
- deff est l'effet de sondage ;
- d la marge d'erreur à tolérer avec un niveau de confiance de 95% et est défini comme une proportion de p (ici la valeur considérée est de 1% de p) ;
- taille moyenne des ZD de la strate en termes de ménages.

Le tableau 3 fournit les paramètres utilisés pour le calcul de la taille de l'échantillon par domaine.

n définitive, on retiendra un échantillon de 160 ZD qui seront réparties comme suit : 50 ZD dans le GOLFE, 60 ZD dans les Autres urbains et 50 ZD dans les milieux ruraux. Cette taille de l'échantillon correspond à 1,5% de la base de sondage, valeur comprise entre 1 et 5% recommandée par les EPC.

Modes de tirage

Les ZD seront tirées de façon indépendante dans chaque strate selon le mode de tirage systématique avec probabilités proportionnelles à leurs tailles en termes de ménages (tirage SPPT).

La procédure de tirage de l'échantillon dans chaque strate est réalisée au moyen du logiciel STATA suivant la méthode SPPT.

Deviations from Sample Design

Aucun

Response Rate

%

Weighting

Calculs des taux d'omission, de couverture et des coefficients de redressement

Définition de certains concepts

Individu apparié : individu enquêté à l'EPC et recensé au dénombrement principal dont une correspondance a été effectivement établie entre ses données à l'EPC et celles du dénombrement principal ;

Individu Omis : individu résident dans la localité au dénombrement principal, enquêté lors de l'enquête post-censitaire dans la localité mais qui n'a pas été effectivement recensé, suite à une absence prolongée, une omission de l'agent recenseur ou un refus ou une omission du répondant, lors du dénombrement principal ;

Individu né après : individu enquêté, mais n'ayant pas été recensé parce qu'il est né après le dénombrement principal dans le ménage ;

Nouveau venu : individu qui s'est installé dans le ménage après le dénombrement principal et qui a été enquêté dans ce dernier ménage ;

Décès apparié : individu recensé lors du dénombrement principal, mais qui n'est plus lors de l'enquête, suite à un décès ;

Départ apparié : individu recensé lors du dénombrement principal, mais qui n'est plus membre du ménage lors de l'enquête, suite à un départ du ménage ;

Sortie appariée : c'est l'ensemble des décès et sorties appariés.

Notations

N = nombre total des ZD au niveau national pendant le dénombrement principal.

h = indice de la strate ; avec $h=1, 2, 3, \dots$

N_h = nombre total de ZD dans la strate h pendant le dénombrement principal.

n_h = nombre de ZD-échantillons dans la strate h pour l'enquête.

E_h = effectif total de la Population dans la strate h .

h_i = indice de la ZD $n^\circ i$ dans la strate h . Avec $i=1, 2, 3, \dots, N_h$.

E_{hi} = effectif de la population dans la ZD $n^\circ i$ de la strate h .

O_{hi} = effectif de la population omise lors du dénombrement dans la ZD $n^\circ i$ de la strate h .

A_{hi} = effectif de la population appariée, dans la ZD $n^\circ i$ de la strate h .

D_{hi} = effectif de la population recensée dans la ZD $n^\circ i$ de la strate h mais partie de la zone d'observation à la date de l'enquête suite à un décès ou à un départ.

NB : Comme dans la pratique il très souvent difficile de savoir si une « sortie » (par décès ou départ) non apparié est une omission ou alors si c'est le « sortant » qui n'est pas éligible à l'enquête (« sortant » n'était pas membre du ménage au moment de la sortie ou la sortie n'a pas eu lieu après le dénombrement), on retient seulement les « sorties appariées » dans le calcul du taux.

th_i = taux d'omission dans la ZD $n^\circ i$ de la strate h .

th = taux d'omission dans la strate h .

T = taux d'omission au niveau national.

Calcul des taux et coefficients de redressement

th_i = taux d'omission dans la ZD $n^\circ i$ de la strate h (Taux générés automatiquement à partir de l'application d'appariement).

Il s'obtient en rapportant, pour une ZD donnée, l'effectif des individus omis à l'ensemble des individus résidents au dénombrement et observés à l'enquête, qu'ils soient non-migrants ou sortis entre le dénombrement et l'enquête.

th = taux d'omission dans la strate h .

C'est la moyenne arithmétique pondérée des taux d'omission calculés dans chacune des ZD-échantillons (th_i). Les coefficients de pondération sont les inverses de probabilité de tirage des ZD-échantillons.

Ø Probabilité de tirage de la ZD-échantillons $n^\circ i$ dans la strate h est

$\Phi_i = E_{hi} / E_h$.

Ø Taux d'omission dans la strate h

Ou encore

T = taux d'omission au niveau national.

C'est la moyenne arithmétique pondérée des taux d'omission calculés dans chaque strate h (th). Les coefficients de pondération sont les poids de chaque strate dans l'ensemble des 3 strates.

K = Coefficient de redressement.

Les effectifs de population issus du fichier brut du dénombrement principal pourraient être ajustés suivant l'ordre de grandeur des taux d'omission calculés (voir tableau ci-dessous).

Le coefficient de redressement permettant de réajuster les effectifs de la population dans chaque strate est calculé à travers la formule suivante : $K_h =$

Confidentiality

Toute utilisation des données produites ou gérées par le Système statistique national (SSN) doit faire l'objet d'une demande d'autorisation adressée à l'Institut National de la Statistique et des Etudes Economiques et démographiques (INSEED) qui en assure la coordination. Il y sera clairement mentionné l'utilisation qui sera faite des données et une copie du projet d'étude et de l'attestation de recherche sera jointe à la demande. En cas d'avis favorable de l'INSEED, un formulaire d'engagement devra être renseigné et signé par l'intéressé. Ce dernier devra transmettre à l'INSEED une copie de son rapport d'étude à des fins utiles.

Access Conditions

Le service ou l'organisation demandeur devra s'engager à respecter les conditions suivantes :

1. L'utilisateur devra se conformer à garantir l'anonymat des personnes physiques ou morales concernées par l'enquête ; et n'utiliser ces données qu'aux fins de diffuser ou de publier des résultats statistiques agrégés.
2. L'utilisateur est responsable de ses conclusions ou études tirées de ces données et en cela, la responsabilité de l'INSEED ne saurait être engagée de quelque manière que ce soit.
3. Les données ne devront être ni copiées ni transmises à d'autres personnes ou organisations, directement ou indirectement, sans l'accord écrit préalable de l'INSEED.
4. Une copie de tout rapport produit sur la base des données sera transmise pour information et commentaire à l'INSEED.
5. L'utilisateur est informé que l'INSEED se réserve le droit de recourir aux voies et moyens qu'il jugera utiles en cas de non respect de l'un quelconque de ces engagements, pour se faire restaurer dans ses droits.
6. L'utilisateur peut en cas de besoin s'adjoindre le concours de l'INSEED dans la réalisation de l'étude.
7. L'utilisateur citera la source comme indiquée à la rubrique "Citation".
